Contents

1. Introduction
What Accident Report is, who uses it, how the workflow runs

2. Getting started
Accessing the system, signing in, roles, demo accounts

3. Operator guide
Creating an investigation report step by step

4. Supervisor guide
Shifts, approvals, rejections, alerts and team performance

5. Administrator guide
Dashboard, users, employers, vehicles, reports, mitigation measures

6. Reports, exports and documents
PDF, Word, Excel and ZIP

7. Using the Android app
What is different on a phone

8. Troubleshooting and FAQ
Common problems and answers

9. Quick reference
One-page cheat sheet and glossary

About this manual

Screen names, buttons and menu entries are written exactly as they appear in the application. Buttons are shown like `this`. Yellow boxes are important notes, green boxes are tips, red boxes are warnings.

CHAPTER 1

Introduction

What is Accident Report?

Accident Report is an incident-investigation management system for airside and transport operations. Investigators fill in a structured, multi-step report — who and what was involved, what happened, why, what was done about it — and attach photos and documents as evidence. Supervisors then review and approve or reject the report, and administrators get dashboards, statistics and bulk exports.

It replaces paper forms and scattered files with a single place where every report is complete, consistent and traceable.

Where does it run?

- **Web** — any modern browser on a computer. All roles are supported, including administration.
- **Android** — the same application as a phone/tablet app, intended for operators and supervisors working in the field.

Both versions are built from one codebase, so screens, labels and behaviour are the same.

The report life-cycle

1. Draft
The operator fills in the report. Progress is saved on the server.

›

2. Submitted
All six sections complete; the operator presses Save.

›

3. Review
A supervisor checks it in *Pending Approvals*.

›

4. Approved / Rejected
Approval stamps the PDF; rejection needs a reason.

›

5. Analysis
Admins see trends, scores and exports.

Key ideas to know

TERM	MEANING
Report	One investigation of one incident, identified by a report number assigned automatically.
Draft	An unfinished report stored on the server. Drafts can be resumed from any device.
Risk level	A number from 1 to 25 = severity × frequency. Higher means more serious.
SMS score	A running safety score per employee. Each approved report adds its risk level to the score of the people involved.
Mitigation measure	An action chosen to reduce the risk. The library of measures grows as people add new ones.

CHAPTER 2

Getting started

Signing in

1. Open the application address given by your company in a browser, or start the Android app.
2. Type your **e-mail or username** and **password** on the login screen (*Log in to continue*).
3. Press **Log In**. You are taken straight to the screen for your role.

> **There is no public sign-up**
> Accounts are created by your company's administrator. If you do not have one, ask your administrator. After several failed attempts the login is temporarily blocked to protect accounts from guessing.

The three kinds of account

ROLE	CODE	LANDS ON	CAN DO
Operator	AERO	Vehicle picker	Create reports and drafts, attach evidence, see their own completed and uncompleted reports.
Supervisor	SUP	Shift picker (A / B / C)	Review the team's reports, approve or reject, see team performance and critical alerts.
Administrator	ADMIN	Admin dashboard	Statistics, users, employers, reports, vehicles, mitigation measures, exports. **Web only.**

> **Access is checked continuously**
> The system re-checks your role and status on every action. If an administrator deactivates your account, you lose access immediately — even if you are still logged in.

Logging out

Use **Logout** in the menu (operators and supervisors) or **Log Off** at the bottom of the admin sidebar. Always log out on shared computers.

Try it first: the public demo

A demo copy with **fictional data** is available so you can explore without risk. It is completely separate from any real system and resets itself every night (around 04:00 UTC).

ROLE	DEMO E-MAIL	WHAT TO TRY
Operator	`operator@demo.invalid`	Pick a vehicle, open drafts and completed reports, download a report as ZIP.
Supervisor	`supervisor@demo.invalid`	Open a shift, approve one pending report and reject another with a reason.
Admin	`admin@demo.invalid`	Browse statistics, users, employers, vehicles and export the database.

All three demo accounts share one password, shown on the demo login page and available on request. Please do not type real names, plates or personal data into the demo.

CHAPTER 3

Operator guide AERO

Operators create the investigation reports. A report has **six sections**. You can fill them in any order, leave and come back — each section button turns **green** once it is complete.

The menu

ENTRY	WHAT IT DOES
New Reports	Back to the report checklist to start or continue a report.
Vehicle	Choose (or change) the vehicle the report is about.
Completed Reports	Your finished reports. Open one to view it or download it.
Uncompleted Reports	Your saved drafts. Tap one to continue editing.
Logout	Sign out.

Starting a report

1. After login you see the **vehicle list** (plate number and description). Tap the vehicle involved.
2. The **checklist** opens with the report number at the top and six section buttons.
3. Tap a section, fill it in, and go back. The button turns green when complete.
4. Use Save Draft at any time to store your progress and start a fresh report number — your draft stays in *Uncompleted Reports*.
5. When all six sections are green, Save appears. Press it to submit the report for review.

> **Red placeholders mean "required"**
> Empty mandatory fields show red hint text such as *Please fill in this field*. Tapping an already-selected option again clears it.

The six sections

1 · Summary

Write a short description of what happened, then classify the event:

- **1.1 Involved** — Aircraft, Vehicle (GSE), Person (fall, entrapment, etc.) or Others (then specify).
- **1.2 Nature of damage** — Personal, Material, Environmental or Others.

- **1.3 Is it a SIF-P event?** — Yes, No or Not applicable.
- **1.4 Declaration signed** — Yes or No.

2 · Investigation Details

Three sub-screens:

2.1 Framing

- Driver of Vehicle A: select the **plate** from your fleet, number of Falsec, company.
- Driver of Vehicle B: same fields.
- Incident data: **date** and **time** of occurrence and the **location** of the incident.

2.2 Description of the Damage Caused

- Describe the damage to the vehicles.
- Enter the **estimated cost** of the damage.

2.3 Data of the Drivers Involved

- **Driver Data A** and **Driver Data B**.
- Choose the employer; company, employee number, function, licence categories, admission date, type of contract, valid training, working hours and shift day are shown or entered.

3 · Actions Developed

Attach the evidence for the investigation. Each group has its own `Attach File or Photo` button:

- **3.1** Copy of the documentation of those involved
- **3.2** Request for clarification from the operator
- **3.3** Internal incident notification
- **3.4** Photographic record
- **3.5** Completed Friendly Accident Report form

Attached files can be **renamed** or **removed** from the list. Section **7 · Other Preventive Actions** is a free-text field on the Root Cause screen for additional measures.

> **Storage limits**
> Your company has a storage allowance. If it is full, new uploads are refused with a message asking for a limit increase; existing files stay available.

4 · Root Cause of the Incident

1. **4. Contributing factors** — describe the circumstances that contributed to the event.
2. **5. Type of cause** — pick from the list.

3 **Category** and **Subcategory** — the lists narrow down according to the type you chose. If a value is missing you can add a new one.

5 · Accident Characterization

Rate the risk of the event. Choose a **severity** (1–5) and a **frequency** (1–5). The system multiplies them to get the **risk level** (1–25).

	F1	F2	F3	F4	F5
S1	1	2	3	4	5
S2	2	4	6	8	10
S3	3	6	9	12	15
S4	4	8	12	16	20
S5	5	10	15	20	25

S = severity, F = frequency. Colours are a visual guide only. Pending reports with a risk level of **15 or more** appear under *Critical Alerts* for supervisors.

Then select the **mitigation measures** taken: choose an existing one from *Select a measure…* or pick ➕ *Create New* and type the new measure. You can also rate the risk *after* the actions are applied.

6 · Conclusion

10. Conclusion — summarise the findings of the investigation in the text box.

After saving

When you press Save the report is sent for review and a **new report number** is started. Your finished report appears under *Completed Reports*, where it stays **Pending** until a supervisor decides. If it is rejected, the reason is shown to you.

To **continue a draft**, open *Uncompleted Reports* and tap it. On Android, New Report clears the current form and starts a blank one.

CHAPTER 4

Supervisor guide SUP

Supervisors review the reports written by their team and decide whether each one is approved or must be redone.

The menu

ENTRY	WHAT IT SHOWS
New Reports	Supervisors can also create reports, like operators.
Shift	Choose shift **A**, **B** or **C**. Lists are filtered to that shift.
My Completed / Uncompleted Reports	Your own reports and drafts.
Team Reports	All reports from your team for the selected shift.
Pending Approvals	Reports waiting for your decision.
Team Performance	Charts of reports over time.
Critical Alerts	Pending reports with a risk level between 15 and 25, highlighted in red.

Approving or rejecting a report

1. After login, pick your **shift** (A, B or C). Try each shift if you do not see pending reports.
2. Open Pending Approvals (or Critical Alerts to deal with the most serious first).
3. Open a report to read it. Evidence can be downloaded as a ZIP.
4. Press **Approve report** to accept it, or **Reject report**.
5. If you reject, a box asks for the **reason**. It is mandatory and limited to **120 characters**.

> **What approval does**
> The PDF of an approved report receives a stamp with *Validated by*, *Referenced* and *Reported by*. Approved reports also add their risk level to the SMS score of the people involved. The operator and the administrators see the decision immediately.

Team Performance

Shows how many reports your team produced. Choose the period (**7, 14 or 30 days**) and filter by state (**All**, **Approved** or **Rejected**). A total for the period is shown above the chart.

CHAPTER 5

Administrator guide ADMIN

> **Web only**
> Administrator accounts are supported on computers only. On Android, signing in as an admin shows the notice *"Admin is computer-only"* and a Back to login button.

The dashboard has a sidebar with six sections and Log Off at the bottom. On wide screens the sidebar stays open; on narrow ones it collapses.

Statistics

The default page. It shows headline numbers — **Reports** in the selected period, **Pending** now and **Critical Pending** — and charts:

- Reports by day and by state.
- Reports by severity (risk-level bins).
- Rejection reasons and which validators decide most.
- Age of open drafts.
- Top employees by SMS score, and SMS score grouped by region or other fields.

Change the number of days and the grouping to focus the charts. Export Database in the top area downloads the entire database as an Excel workbook (one sheet per table).

Users

Create accounts, edit details, set the role (operator, supervisor, admin) and **deactivate** people who leave. Deactivation is immediate. Export Table downloads the visible table as Excel.

> **User limit**
> Each customer has a maximum number of active users. At the limit, creating another user is refused with a message; deactivating someone frees a place.

Employers

The people involved in incidents (drivers and staff), with company, function, region and **SMS score**. Row actions include Renew Validity, Validity History (document expiry renewals with a full history) and Export All Info — a dossier of everything recorded for that person.

Reports

Every report of the company with its state, risk level, vehicle and validator. Open any report or export the table.

Vehicles

The fleet: plate number, label and details. Add vehicles and edit them here; these are the choices operators see on the vehicle list. Vehicle statistics show how often each is involved in incidents.

Mitigation Measures

The shared library of measures chosen in Accident Characterization. Review, rename or delete entries, and see how frequently a measure is used per employer to spot repeated problems.

CHAPTER 6

Reports, exports and documents

FORMAT	WHERE	CONTENTS
PDF	Inside the report's ZIP	The official report template filled with the data. Approved reports carry the "Validated by / Referenced / Reported by" stamp.
ZIP	Completed Reports → download	The PDF plus all attachments, organised in numbered folders (3.1 to 3.5).
Word (.docx)	Export options in the report	An editable version of the report. The app offers to share or save the file.
Excel (.xlsx)	Admin → Export Table / Export Database	The table you are viewing, or every table of the database (one sheet per table).

Sensitive data is removed

The database export leaves out password hashes, tokens and other sensitive columns. Very large tables that exceed Excel's row limit are truncated and the system tells you which ones.

Tip

Download the ZIP rather than only the PDF if you need to forward the whole case — it keeps photos and documents together with the report.

CHAPTER 7

Using the Android app

- Operators and supervisors can do everything described in chapters 3 and 4 on the phone.
- **Administrators** must use a computer (see chapter 5).
- The layout adapts to the keyboard and to the safe areas of the screen (notches and system bars), so fields stay visible while you type.
- `New Report` is available on the checklist on mobile to clear the current form and start fresh.
- With `Attach File or Photo` you can take a photo with the camera (the app asks for camera permission the first time) or pick a document from the phone.
- Drafts are stored on the server, so you can start a report on the phone and finish it on a computer.

> **Internet connection needed**
> Reports, drafts and uploads are stored on the server. Without a connection, the app cannot load vehicles or save. Reconnect and retry.

CHAPTER 8

Troubleshooting and FAQ

I cannot log in.

Check the e-mail/username and password (passwords are case-sensitive). After repeated failures the login is paused briefly — wait a few minutes. If your account was deactivated, ask your administrator.

I was logged out suddenly.

Your session expired or your account was deactivated. Log in again; if it still fails, contact your administrator.

The Save button is missing.

It only appears when all six sections are green. Open each section that is not green and fill in the fields marked with red hints. Save Draft is always available.

Where did my unfinished report go?

Open *Uncompleted Reports*. Every draft saved with Save Draft is kept there until you finish or delete it.

My upload was refused.

The company storage is probably full. Ask your administrator to request a larger allowance. Existing files remain accessible.

I cannot create a new user.

The company has reached its user limit. Deactivate an unused account or ask for a larger limit.

I am an admin and see “Admin is computer-only”.

Administration is not available on Android. Sign in from a computer.

A supervisor rejected my report. What now?

Open the report, read the reason, correct the data and submit again.

Is my data safe?

Passwords are stored as one-way hashes, connections use HTTPS, each customer’s data is isolated from the others, and daily backups are encrypted and stored off-site.

CHAPTER 9

Quick reference

Who does what

TASK	WHERE
Start a report	Operator → pick vehicle → checklist
Keep it for later	Save Draft → Uncompleted Reports
Submit for review	Save (all six sections green)
Approve / reject	Supervisor → Pending Approvals
Handle serious cases first	Supervisor → Critical Alerts (risk 15–25)
See trends	Admin → Statistics
Add or deactivate a user	Admin → Users
Add a vehicle	Admin → Vehicles
Export everything	Admin → Export Database

Mini glossary

TERM	MEANING
AERO / SUP / ADMIN	Operator, supervisor and administrator roles.
GSE	Ground support equipment — vehicles and machinery used on the apron.
SIF-P	Serious injury or fatality (potential) classification asked in section 1.3.
Risk level	Severity (1–5) × frequency (1–5) = 1 to 25.
SMS score	Cumulative safety score per employee, raised by approved reports.
Draft	An unfinished report saved on the server.
Quota	Maximum users and storage allowed for your company.
